

# Professional Development Courses

## Fire Panels

### ConfigManager Intermediate

#### Course Overview

To teach participants to understand the operation and use of the ConfigManager configuration programme. This course involves programming a FireFinder panel including 1668 fan controls.

#### Prerequisites

Completion of the ConfigManager Introduction Course.

#### Key Topics

- Advanced functions
- Logical points
- Uploading and downloading a program to and from FireFinder
- Programming 1668 controls

#### Methodology

Group instruction and discussion, hands on practical exercise, visual aids and comprehensive course documentation

#### Expected Outcome

At the completion of the course participants will be expected to be able to:

- Have a clear understanding of all of the features of ConfigManager
- Configure and programme a FireFinder FACP using AMPAC's ConfigManager configuration tool
- Be able to programme 1668 controls
