

PROJECT SNAPSHOT

APARTMENTS

PROJECT NAME : HARBOUR GREEN APARTMENT COMPLEX, AUCKLAND, N.Z.

FireFinder™ / EWS

OVERVIEW

The Harbour Green Apartment Complex is located within the Auckland CBD and joins the growing list of apartment buildings protected by Ampac.

SYSTEM SUMMARY

The system comprises of a **FireFinder™** / EWS combination panel with 4 loops and 12 audio zones. Analogue smoke detectors installed to apartments are fitted with sounder bases to provide local alarm in compliance with an NZ Type 5 system. The EWS provides staged evacuation to the building in the event of a MCP or sprinkler activation.

SITE SPECIFIC CHALLENGES

It's location adjacent to Auckland's major arterial routes meant that deliveries to site to suit a fast track program had to be well coordinated.

SITE SPECIFIC SOLUTIONS

The equipment required for this project was ordered and quarantined at the local Ampac Customer Service Office. Individual floor lots were boxed up and delivered to site as required.

INSTALLER'S STATEMENT

"Parking anywhere near the site was almost impossible. The service provided by Ampac was invaluable as it meant our staff could get on with the installation with less down time. Thanks Ampac!"

Kevin Roughead – Fire Security Services Ltd

SPECIFICATION

Panels / Network Nodes	1 / 1
Loops	6
Zones	12
Panel Relays	24
LED mimic	1
LCD Repeaters	-
Detectors	300+
Devices	50
Door Holders	1
Sounders / Speakers	500
Detector Model	XP95 & sounder base
