

PROJECT SNAPSHOT

NURSING HOMES

INGLEWOOD NURSING HOME

FireFinder™

OVERVIEW

The Inglewood Nursing Home, located in the suburbs of Perth has been upgraded for the Brightwater Care Group, transforming the existing site into a modern facility. The nursing home now consists of 48-beds with a separate administration block.

SYSTEM SUMMARY

The existing fire panel was replaced with two stand-alone brigade connected *FireFinder™* systems.

SITE SPECIFIC CHALLENGES

A complicated flow switch arrangement required a site specific software solution.

With a tight building schedule it was important to have each stage commissioned on time.

SITE SPECIFIC SOLUTIONS

Ampac's productivity improving tools allowed a very smooth transition from the existing system to the new analogue technology.

The flexibility of the 3 I/O device coupled with the *ConfigManager* programming software allowed installer to successfully negotiate the complicated Flow Switch requirements.

LoopManger was used to pre-commission the detection loops prior to the arrival of the Fire Alarm Control Panel.

INSTALLER'S STATEMENT

"This two stage installation program has been simplified using the *FireFinder™* system. The close working relationship between Central Fire and Ampac ensured the installation was completed on time."

Steve Potter – Central Fire Services

SPECIFICATION

Panels/Network Nodes	2
Loops	3
Zones	0
Panel Relays	16
Fire Fan Controls	0
LCD Repeater	0
Detectors	186
Devices	25
Sounders/Speakers	43
Door Holders	20
Detector Model	XP95
